

Federal Reserve Bank of New York (On-Site via Gresham)

Senior Business Analyst / DevOps Release Coordinator

Apr 2017 – Feb 2026

Relevant Experience

- Supported enterprise modernization initiatives involving requirements analysis, workflow review, platform transformation, testing, and implementation support.
- Elicited, analyzed, documented, and validated business and system requirements while partnering with business, technology, operations, and compliance stakeholders.
- Supported system-change initiatives from requirements through implementation, including workflow analysis, data-load redesign, testing coordination, UAT support, and stakeholder communication.
- Partnered with stakeholders to evaluate business needs, assess risks and impacts, validate proposed solutions, and support delivery across SDLC activities.
- Supported Oracle-based data-distribution models using master and consumer-specific views for downstream applications, reporting platforms, and business consumers.
- Assisted cloud-migration and REST API transition validation by comparing legacy Oracle-based data-access patterns with emerging service-based delivery models.
- Supported semiannual disaster-recovery failover and switchover exercises for mission-critical pricing platforms, validating business continuity, data integrity, and operational readiness.
