

Federal Reserve Bank of New York (On-Site via Gresham)

Senior Business Analyst / DevOps Release Coordinator

Apr 2017 – Feb 2026

Relevant Experience

- Supported a fixed-income streaming market-data platform that normalized, validated, consolidated, and distributed pricing data from multiple vendor feeds to downstream consumers.
- Supported market-data workflows involving vendor-feed integration, pricing validation, data-quality controls, and downstream consumer delivery across on-premises and AWS environments.
- Provided application support and production support for mission-critical Linux/Oracle market-data platforms.
- Investigated production issues involving market-data feeds, pricing validation, data-cleansing workflows, application behavior, and downstream consumer impact.
- Supported application modernization and REST API transition initiatives that evolved pricing distribution from Oracle consumer views to service-based API delivery.
- Assisted cloud-migration and API-transition validation by comparing legacy Oracle-based data-access patterns with emerging REST-based service models.
- Supported semiannual disaster-recovery failover and switchover exercises between primary and secondary data centers, validating continuous vendor-feed ingestion, downstream consumer distribution, minimal downtime, and no data loss during planned DR events.
