AEGIS Insurance Services, Inc.

Dear Hiring Manager,

Thank you for considering my application for the Senior Business Analyst position at AEGIS Insurance Services. Ahead of the virtual interview scheduled for Monday next week, I wanted to provide an updated copy of my resume along with additional background information relevant to the role.

Since initially applying in March, I have refined my resume to better reflect the breadth of my experience supporting enterprise business applications, application support operations, QA/UAT coordination, SDLC delivery, and production release management within both insurance and financial services environments.

Throughout my career, I have worked at the intersection of business operations, application support, and technology delivery. Most recently, at the Federal Reserve Bank of New York through Gresham Technologies, I supported business-critical financial market data applications operating across Linux, Oracle, and AWS environments. My responsibilities included production application support, release coordination, deployment validation, requirements prioritization, QA testing support, and cross-functional coordination between business, infrastructure, database, and operations teams.

In addition, I bring direct insurance industry experience through positions at AIG Property Casualty PMO, AIG Travel Guard Worldwide, and EmblemHealth. In these roles, I supported enterprise business applications, managed enhancement requests, coordinated UAT activities, developed requirements and test plans, facilitated stakeholder communications, and contributed to operational workflow improvements within regulated enterprise environments.

I am very interested in the opportunity to contribute to AEGIS and believe my background aligns well with the collaborative, operational, and application support-oriented nature of the role. I look forward to discussing my experience further during the interview process.

Thank you again for your time and consideration.

Sincerely,

Paul Lyu
